数控车床 CK6140A CNC LATHE

用途与特点

CK6140A 数控车床主要适用于盘、套、短轴类零件高效、精密加工。

机床床身平置，X、Z向导轨采用预负荷直线滚动导轨。滚珠丝杠采用双端固定，支承采用滚珠丝杠专用角接触球轴承。主传动及进给传动系统均采用无间隙联结方式，机床采用动力夹盘。

机床采用刀排装夹刀具，也可配置电动刀架。机床采用全封闭防护，结构紧凑，占地面积小。滚动直线导轨副，滚珠丝杠副均采用自动周期润滑，使日常的维护保养简单方便。

机床数控采用交流伺服系统，依客户需要可配置不同的数控系统。主轴电机采用交流变频调速电机或交流伺服电机，可实现恒线速切削。

该机床具备 C 轴功能，配备不同的动力刀座可实现径向、轴向孔加工及铣削功能。

USES AND CHARACTERISTICS

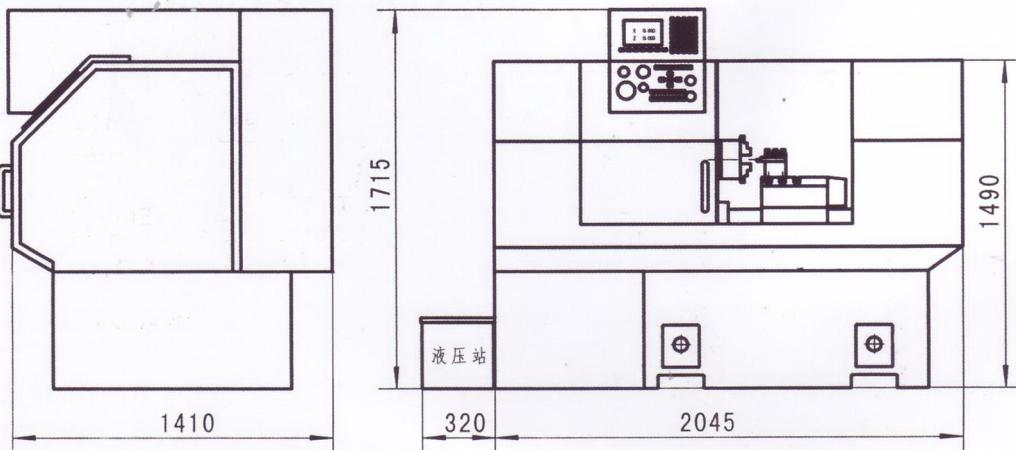

CK6140A CNC lathe is available in trays, collets and short spindles, with highly efficient and accurate working.

The lathe body is arranged horizontal. The X and Z direction guide ways are all adopt with pre-loading rolling guide way. The ballscrew supporter is adopted with special angular contact ball bearing in two ends, the main drive and feed drive system are both contacted without interval. The lathe is adopted with motor chuck.

The lathe is fitted with line tool carrier, or can be fitted with motor tool carrier. It is protected entirely closed and designed compactedly, with small area. The rolling lineal guideway and the ball leading screw are both lubricated periodically, and it makes daily maintenance simple and convenient.

The CNC system is adopted with Servo system and can be fitted with different CNC system according to customers' requests. The spindle drive system is alternative by variable frequency motor or Ac servo spindle, which realized permanent speed turning.

The lathe can work as axis C, and can be use for machining hole (radial or axial) and milling when it fitted with different motor tool carrier.
